

SUCCESS STORY

NEWTON-WELLESLEY HOSPITAL

JJWild supports successful migration to MEDITECH
MAGIC OSAL on the Windows 2000 platform

Newton-Wellesley Hospital (NWH), a 249-bed acute care community hospital located in Newton, Massachusetts, provides health services to the western suburbs of Boston. It is a non-profit organization offering patients a wide range of medical, surgical, obstetric, psychiatric, pediatric, and subspecialty care. The hospital medical staff includes nearly 1,000 physicians practicing a full range of specialties.

The move to MAGIC OSAL

NWH is a long-time user of Meditech HCIS software and relies on it for a substantial percentage of its information technology requirements. NWH uses most of Meditech's clinical and all of its financial and administrative applications. Recently, the hospital beta tested and brought into production the new Meditech OSAL (Operating System Abstraction Layer) platform on Compaq ProLiant™ Intel-based machines running Microsoft® Windows® 2000. The new systems were integrated and are supported by JJWild.
